B. Sc. (Information Technology)		Semester – VI		
Course Name: Principles of Geographic Information		Course Code: USIT604		
Systems		(Elective I)		
Periods per week (1 Period is 50 minutes)		5		
Credits		2		
		Hours	Marks	
Evaluation System	Theory Examination	21/2	75	
	Internal		25	

Unit	Details	Lectures
Ι	<ul> <li>A Gentle Introduction to GIS</li> <li>The nature of GIS: Some fundamental observations, Defining GIS, GISystems, GIScience and GIApplications, Spatial data and Geoinformation.</li> <li>The real world and representations of it: Models and modelling, Maps, Databases, Spatial databases and spatial analysis</li> <li>Geographic Information and Spatial Database</li> <li>Models and Representations of the real world</li> <li>Geographic Phenomena: Defining geographic phenomena, types of geographic phenomena, Geographic fields, Geographic objects, Boundaries</li> <li>Computer Representations of Geographic Information: Regular tessellations, irregular tessellations, Vector representations, Topology and Spatial relationships, Scale and Resolution, Representation of Geographic fields, Representation of Geographic objects</li> <li>Organizing and Managing Spatial Data</li> <li>The Temporal Dimension</li> </ul>	12
Π	<ul> <li>Data Management and Processing Systems</li> <li>Hardware and Software Trends</li> <li>Geographic Information Systems: GIS Software, GIS Architecture and functionality, Spatial Data Infrastructure (SDI)</li> <li>Stages of Spatial Data handling: Spatial data handling and preparation, Spatial Data Storage and maintenance, Spatial Query and Analysis, Spatial Data Presentation.</li> <li>Database management Systems: Reasons for using a DBMS, Alternatives for data management, The relational data model, Querying the relational database.</li> <li>GIS and Spatial Databases: Linking GIS and DBMS, Spatial database functionality.</li> </ul>	12
III	<b>Spatial Referencing and Positioning</b> <b>Spatial Referencing:</b> Reference surfaces for mapping, Coordinate Systems, Map Projections, Coordinate Transformations	12

	<ul> <li>Satellite-based Positioning: Absolute positioning, Errors in absolute positioning, Relative positioning, Network positioning, code versus phase measurements, Positioning technology</li> <li>Data Entry and Preparation</li> <li>Spatial Data Input: Direct spatial data capture, Indirect spatial data capture, Obtaining spatial data elsewhere</li> <li>Data Quality: Accuracy and Positioning, Positional accuracy, Attribute accuracy, temporal accuracy, Lineage, Completeness, Logical consistency</li> <li>Data Preparation: Data checks and repairs, Combining data from multiple sources</li> <li>Point Data Transformation: Interpolating discrete data, Interpolating continuous data</li> </ul>	
IV	<ul> <li>Spatial Data Analysis</li> <li>Classification of analytical GIS Capabilities</li> <li>Retrieval, classification and measurement: Measurement, Spatial selection queries, Classification</li> <li>Overlay functions: Vector overlay operators, Raster overlay operators</li> <li>Neighbourhood functions: Proximity computations, Computation of diffusion, Flow computation, Raster based surface analysis</li> <li>Analysis: Network analysis, interpolation, terrain modeling</li> <li>GIS and Application models: GPS, Open GIS Standards, GIS Applications and Advances</li> <li>Error Propagation in spatial data processing: How Errors propagate, Ouantifying error propagation</li> </ul>	12
V	<ul> <li>Data Visualization</li> <li>GIS and Maps, The Visualization Process</li> <li>Visualization Strategies: Present or explore?</li> <li>The cartographic toolbox: What kind of data do I have? How can I map my data?</li> <li>How to map? How to map qualitative data, How to map quantitative data, How to map the terrain elevation, How to map time series</li> <li>Map Cosmetics, Map Dissemination</li> </ul>	12
